mail@ugurdindar.com Bursa, Türkiye 23/01/2001 Türkiye and Bulgaria Citizen

Profile

Software Engineer experienced in building secure payment systems and event-driven applications with Java, Spring Boot, and Apache Kafka. I enjoy solving complex problems, improving large codebases, and building shared tools that other teams can use. Alongside hands-on development, I contribute to division-level Kafka and AI-assisted security initiatives and build reusable AI agent tooling to support everyday engineering work.

Professional Experience

Software Engineer, Garanti BBVA Technology 06/2023 | Remote, Turkey

- **Payment Architecture & Integrations:** Re-engineered the payment gateway to support the 3D authentication model alongside existing 3D_PAY flows. Contributed to shared Payment Facilitator infrastructure and delivered a bank integration using this architecture.
- **Application Security:** Address critical vulnerabilities and business logic security risks across Virtual POS and other payment applications, implementing secure coding and data protection measures to support PCI DSS compliance.
- **Large-Scale Encryption Migration:** Designed a dual-algorithm adapter supporting legacy and new encryption standards during a PCI DSS migration. Contributed to batch processing that re-encrypted over 30 million sensitive records and managed production deployment and releases.
- **Shared hCaptcha Infrastructure:** Developed a reusable hCaptcha integration library for Virtual POS, GarantiPay, and other applications, subsequently adopted by another team without modification.
- **Reusable Rate Limiting:** Designed and implemented a shared rate limiting framework supporting both cache-based and cacheless environments, adopted across multiple production projects.
- **Token Management & Concurrency:** Designed a thread-safe token lifecycle mechanism shared across core production systems, combining caching, automatic renewal, and retry handling. Resolved race conditions in high-traffic payment processing to prevent request loss.
- **Apache Kafka Expertise:** Serve as a division-level Apache Kafka subject matter expert, with hands-on experience integrating Kafka into GarantiPay 2.0 transaction processing to decouple services and improve reliability.
- **Organizational Initiatives:** Represented the unit in configuration management standardization and governance. Contribute to a division-wide initiative focused on AI-assisted software security assessment and review.
- **Shared AI Development Toolkit:** Built a reusable toolkit used across multiple IDEs and development environments, combining custom AI agents, shared memory, MCP integrations, tools, and development rules. Use the toolkit in engineering work at Garanti BBVA Technology.
- **AI-Assisted Delivery:** Actively use the team's Claude-based digital worker for software development. Apply context and token optimization practices across AI-assisted workflows.
- **Platform Modernization:** Contribute to major refactoring efforts and JBoss 8 and JDK 21 upgrades across large enterprise payment codebases.
- **Mobile Authentication:** Implemented WebOTP and SMS AutoFill support in ACS authentication flows for iOS and Android users.

Software Developer, Ford Otosan 10/2021 – 06/2023 | Eskişehir, Turkey

- **Enterprise Modernization & Lifecycle Management:** Successfully migrated a critical, widely used internal web application from legacy ASP.NET WebForms (.NET 3.5) to .NET Framework 4.8, significantly extending the system's maintainability, security, and operational lifespan.
- **Core Framework Engineering:** Developed and optimized internal .NET Core framework libraries and shared components, which were subsequently adopted across multiple Ford Otosan application teams to standardize development practices.

- **Automotive Manufacturing Systems:** Engineered and maintained multiple production and Conformity of Production (CoP) management systems across various manufacturing facilities, with a primary focus on the Eskişehir production plant, driving the lifecycle from initial workflow analysis to deployment.
- **AI-Driven Quality Management Platform:** Co-developed and delivered *Quality Pool* (also utilized as a graduation project), an automotive warranty and quality issue classification platform. Designed and integrated a Flask-based API utilizing a tuned **Random Forest Classifier** model to provide automated solution recommendations for manufacturing defects.

Software Engineering Intern, Baykar Technology 08/2021 – 09/2021 | İstanbul, Turkey

- **Workflow Automation & Optimization:** Designed and developed a .NET desktop application to automate the initial setup, installation, and verification processes for Ground Control Units (GCU) used in Unmanned Combat Aerial Vehicle (UCAV) systems.
- **Deployment Reliability:** Automated system-level adjustments and dependency installations (runtimes, profiles, and configurations), successfully minimizing human error in critical deployment procedures and significantly reducing manual operational workload.

Education

Bachelor's Degree, Eskişehir Technical University 09/2019 – 06/2023 | Eskişehir, Turkey

Computer Engineering, GPA: 3.70 - Graduated as 1st in the Computer Engineering Department
Activities and societies: Technical Lead and one of the founders of Eskişehir Technical University Software Community. (estuyazilim.com - github.com/ESTUYazilim)

Languages

English
Bilingual proficiency

Turkish
Native proficiency

German
Elementary proficiency

Skills

Front-end
HTML, CSS, Javascript, Typescript, React, Angular, Next, Bootstrap, JQuery

Engineering Tools
Git, Azure DevOps, Toad, Bitbucket, Jenkins, JFrog, SonarQube, AttackFlow, Fortify, Dynatrace

Other
Competitive Programming

Application Security
Secure Coding, Business Logic Security, PCI DSS, Authentication, Encryption, Rate Limiting, hCaptcha

Back-end & Architecture
Spring Boot, Spring, .NET / .NET Core, Apache Kafka, Distributed Systems, Event-Driven Architecture, Microservices, REST APIs, gRPC, Concurrency, Aspect-Oriented Programming, Unit Testing

Interpersonal
Communication, Teamwork, Organization, Critical Thinking, Always Punctual, Problem Solving

AI-Assisted Engineering
Custom AI Agents, Model Context Protocol (MCP), Shared Agent Memory, Cross-IDE Development Tooling, Context & Token Optimization, Claude Digital Worker

Certificates

- ScrumInc Scrum Team Member
- IBM Full Stack Software Developer Assessment
- Google Project Initiation: Starting a Successful Project
- AWS Fundamentals: Building Serverless Applications
- IBM Introduction to Containers w/ Docker, Kubernetes & OpenShift
- Google Project Planning: Putting It All Together
- Google Cloud Building Scalable Java Microservices with Spring Boot and Spring Cloud
- AWS S3 Basics
- Google Capstone: Applying Project Management in the Real World
- DeepLearning.AI AI For Everyone
- Google Foundations of Project Management
- Google Agile Project Management

Awards

OBSS Code Master 2021 2nd in the first stage, OBSS

Projects

Virtual Patient , A mobile application developed in collaboration with the faculty members of the Nursing Department at Eskişehir Osmangazi University to provide nursing students with practical experience in patient care aspects.

VPatient Mobile Application
VPatient API
VPatient Demonstration

Quality Pool, Graduation project (Tübitak 2209-B)

Management, Classification and Solution Recommender Platform for Warranty and Quality Processes in Automotive Industry. Tübitak 2209-B Project with cooperation Ford Otosan.
