mail@ugurdindar.com [Bursa, Türkiye](#) [23/01/2001](#) [Türkiye and Bulgaria Citizen](#)

Profile

Performance-driven Software Engineer with extensive experience in developing scalable, event-driven distributed systems and secure payment ecosystems. Skilled in handling high-concurrency architectures, enterprise-level token lifecycles, and massive data migrations involving tens of millions of sensitive records. Demonstrated ability to take corporate initiatives as a unit representative, balancing robust engineering practices with clear team communication and security compliance. Passionate about solving complex architectural problems, ensuring fault tolerance, and continuously delivering high-impact technical solutions.

Professional Experience

Software Engineer, Garanti BBVA Technology [🔗](#) 06/2023 | Remote, Turkey

- **3D Secure & Payment Gateway Evolution:** Re-engineered the entire payment gateway infrastructure to integrate **3D Model** support alongside the existing **3D_PAY** model. This involved managing the architectural transition from bank-side authentication to flexible merchant-integrated flows, ensuring deep technical alignment with varied bank integration requirements.
- **Scalable Rate Limiting Framework:** Designed and implemented a maintainable **Rate Limiting** structure with support for both cache-based and cacheless environments. The system was engineered for reusability and has since been adopted as a core component across multiple production projects.
- **Advanced Security Hardening:** Beyond standard mitigation of **XSS, CRLF, and SQL Injection**, proactively implemented custom **Business Logic** security layers. Applied rigorous secure coding and data handling practices to maintain full PCI-DSS compliance and protect against complex fraud patterns.
- **Enterprise Initiative Leadership:** Served as the **Unit Representative** for configuration management within the organization, leading efforts to standardize and govern system configurations. Actively participated in cross-functional initiatives, including security hardening and youth-centric banking solutions.
- **Massive Data Encryption Migration:** Architected a dual-algorithm adapter to maintain uninterrupted support for both legacy and new cryptographic standards during a large-scale **PCI-DSS compliance** migration. Contributed to the high-performance batch processing application responsible for the secure re-encryption of **over 30 million highly sensitive records**, and successfully drove the deployment and release management processes into the production environment.
- **Enterprise Token Lifecycle Architecture:** Designed and implemented a thread-safe, high-availability token lifecycle mechanism shared across multiple core production systems. Implemented double-checked locking and AtomicReference for concurrency control, integrated cache management with expiry policies, and engineered **AOP-driven** automatic renewals with retryable buffering to completely eliminate redundant token fetching.
- **Core Infrastructure & Facilitator Systems:** Contributed to the development of shared infrastructure used in **Payment Facilitator** projects. Successfully delivered a full bank integration by leveraging this common architecture, optimizing the integration lifecycle for future scalability.
- **High-Traffic Concurrency Optimization:** Eliminated rare multithreaded race conditions by re-engineering critical concurrency mechanisms, preventing request loss during sub-2ms high-traffic processing windows.
- **Modern Authentication Flows:** Enhanced the ACS flow by implementing **WebOTP / SMS AutoFill** support using user-agent detection and WebOTP APIs, significantly improving authentication success rates for iOS and Android users.
- **Event-Driven Architecture:** Integrated **Apache Kafka** pipelines into GarantiPay 2.0 transaction processing to decouple services and enhance the overall reliability and scalability of the payment ecosystem.

Software Developer, Ford Otosan

10/2021 – 06/2023 | Eskişehir, Turkey

- **Enterprise Modernization & Lifecycle Management:** Successfully migrated a critical, widely used internal web application from legacy ASP.NET  WebForms (.NET 3.5) to .NET Framework 4.8, significantly extending the system's maintainability, security, and operational lifespan.
- **Core Framework Engineering:** Developed and optimized internal .NET Core framework libraries and shared components, which were subsequently adopted across multiple Ford Otosan application teams to standardize development practices.
- **Automotive Manufacturing Systems:** Engineered and maintained multiple production and Conformity of Production (CoP) management systems across various manufacturing facilities, with a primary focus on the Eskişehir production plant, driving the lifecycle from initial workflow analysis to deployment.
- **AI-Driven Quality Management Platform:** Co-developed and delivered *Quality Pool* (also utilized as a graduation project), an automotive warranty and quality issue classification platform. Designed and integrated a Flask-based API utilizing a tuned **Random Forest Classifier** model to provide automated solution recommendations for manufacturing defects.

Software Engineering Intern, Baykar Technology

08/2021 – 09/2021 | İstanbul, Turkey

- **Workflow Automation & Optimization:** Designed and developed a .NET desktop application to automate the initial setup, installation, and verification processes for Ground Control Units (GCU) used in Unmanned Combat Aerial Vehicle (UCAV) systems.
- **Deployment Reliability:** Automated system-level adjustments and dependency installations (runtimes, profiles, and configurations), successfully minimizing human error in critical deployment procedures and significantly reducing manual operational workload.

Education

Bachelor's Degree, Eskişehir Technical University

09/2019 – 06/2023 | Eskişehir, Turkey

Computer Engineering, GPA: 3.70 - Graduated as 1st in the Computer Engineering Department

Activities and societies: Technical Lead and one of the founders of Eskişehir Technical University Software Community. (estuyazilim.com - github.com/ESTUYazilim)

Languages

English

Bilingual proficiency

Turkish

Native proficiency

German

Elementary proficiency

Skills

Front-end

HTML, CSS, Javascript, Typescript, React, Angular, Next, Bootstrap, JQuery

Tools

Git, Azure DevOps, Toad, Bitbucket, Jenkins, JFrog, SonarQube, AttackFlow, Fortify, Dynatrace

Other

Competitive Programming

Back-end

Spring, Spring Boot, .NET, .NET Core, PL/SQL, MySQL, MongoDB, Aspect Oriented Programming, RESTful and gRPC APIs, Microservices, Unit Testing, Elastic Stack, Apache Kafka

Interpersonal

Communication, Teamwork, Organization, Critical Thinking, Always Punctual, Problem Solving

Certificates

- ScrumInc Scrum Team Member [↗](#)
